## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1742

Claims 38, 39, 42, 43 and 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fisher et al (US 5,033,531). The patent to Fisher et al discloses a filter for filtering molten iron including an inoculant for molten iron including ferrosilicon mixed with a material such as a rare-earth (col.8, lines 20 to 63) but does not explicitly disclose the carrier (ferrosilicon) comprises at least 30% ferrosilicon but Fisher et al disclose a filter with particles of an inoculant having a composition of 65 % silicon, 1.4 %, aluminum, 1.4 % calcium, 4 % manganese, 3.75 % zirconium and balance iron (col.5, lines 16 to 28) so that it would have obvious to one of ordinary skill in the art that the Fisher et al inoculant comprises at least 30 % silicon and iron.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention:

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 4 is indefinite because the process limitation does not further limit the claimed assembly.

***Allowable Subject Matter***

Claims 1 to 3, 5 to 37 and 45 to 63 are allowed.

Claim 4 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Art Unit: 1742

Claims 40 and 41 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: Fisher et al does not disclose or suggest a filter which only allows particles below 10  $\mu$  to pass there through; an assembly comprising a pellet and a filter wherein the ratio of mass of the pellet to surface area of the filter is at least 0.75 to no more than 1.5 and a pellet having a dissolution rate of at least 1 mg/sec to no more than 320 mg/sec.
